

FUNCTIONAL

MOBILITY+

A LIFETIME OF ACTIVE FUN

Long walks and the daily outdoor experience require **extra support** for muscles and joints. Mobility+ is the 'Next Step' to help dogs stay naturally active. The recipe is **grain-free** and features an optimal mix of nutrients that contribute to **supple muscles and joints**. Mobility+ is suitable for dogs of all breeds (from 1 year of age) and contains delicious, **fresh chicken**.

- ✓ Collagen, glucosamine & chondroitin
Supports healthy joints
- ✓ Omega 3, EPA & DHA
Promotes healthy exercise
- ✓ Vitamin C & E
Contributes to supple muscles
- ✓ L-carnitine
Stimulates fat burning
- ✓ Rich in fresh chicken
Maintains muscle mass
- ✓ Hypoallergenic
Grain-free and mono-protein
(fresh) chicken

FUNCTIONAL

MOBILITY+

THE 'NEXT STEP'
IN HEALTHY EXERCISE

We like to move it!

Move, move and move again: that's what dogs naturally love to do! After all, they are not made to sit still - and neither are their owners really, are they! How nice is it that your dog inspires you every day, even in bad weather, to get some fresh air! For that very reason, you don't want your four-legged friend to have any discomfort while moving. Through his food, you can support your dog even better!

Muscle POWER

To build and maintain muscle mass, high-quality proteins, such as fresh chicken, are crucial. After all, during exercise, your dog's muscles are constantly exposed to stress. Antioxidants, such as vitamins C and E, selenium and omega 3 fatty acids, play a major role in protecting and repairing muscle fibres.

VITAMIN C & E

Vitamin C and E are antioxidants that help protect cells. Antioxidants are also good for immunity and beneficial for supple muscles.

THINGS RUN smoothly

Glucosamine and chondroitin are clinically proven to contribute to healthy joints. The combination with collagen also provides an optimal mix to keep cartilage and joints moving smoothly. Omega 3 fatty acids, especially EPA from fish oil, and vitamin C further help during intense physical activity.

Flexibility

Flexibility is crucial for both your dog's muscles and joints. Flexibility is the ability of joints to move more freely because flexible muscles allow more movement. Flexibility thus facilitates better mobility. It also improves muscle development, recovery, physicality and mental well-being. In short, flexibility helps your dog feel better in his skin. Literally and figuratively!

FISH OIL

Fish oil is rich in the Omega 3 fatty acids EPA and DHA. These fatty acids are not only good for mental well-being, they also slow down the ageing process and support better immunity.

A GOOD weight

To enjoy exercise, an optimal weight is very important. L-carnitine stimulates fat burning and thus helps maintain a healthy weight. Moreover, plant fibres provide a satiated feeling for longer, so your dog will beg less and feel better about himself.

L-CARNITINE

L-carnitine stimulates fat burning and helps to maintain a fit body.
